
Remote Hydrography

Innovation, Application & Experience
27-28 February 2024 | Dublin, Ireland

THS:UKI were proud to be back in the fantastic city of Dublin for the return of Remote Hydrography Conference and Exhibition (RH24).

Bringing the seabed mapping community together in this way to share ideas and experience is one of the Society's core objectives. THS:UKI exists to promote the science of surveying at sea, encourage the broadest inclusion of people and organisations, create a network for their interaction and promote dissemination and free exchange of information.

Bringing RH24 back to Dublin builds on the Society's name and footprint expansion to include Ireland back in 2021 and further celebrates this and the positive impact it has had to date. We gratefully acknowledge our partners who were instrumental in enabling this - Geological Survey Ireland, Marine Institute, INFOMAR and Fáilte Ireland.

Throughout the 2 day event cutting edge technologies, innovative methodologies and best practices that are shaping

the future of hydrographic surveying and mapping were explored. Discussions spanned from the intricacies of data acquisition to the broader implications for maritime safety, environmental protection and the policies governing our industry's work. It was evident that we face collective challenges and we must continue to push boundaries of knowledge and foster collaboration across disciplines, companies and countries, whilst striving for excellence.
